

Assignment 3 JSON

Write a web application that does the following, using java programming language.

Based on the following Employee structure JSON Array

```
[
  {
    "FirstName": "Sam" ,
    "LastName": "Jackson" ,
    "EmployeeID": 1000 ,
    "Designation": "Manager",
    "KnownLanguages": [
      {
        "LanguageName": "Java",
        "ScoreOutof100": 90
      },
      {
        "LanguageName": "C#",
        "ScoreOutof100": 50
      },
      {
        "LanguageName": "C++",
        "ScoreOutof100": 80
      }
    ]
  },
]
```

```
{
  "FirstName": "John" ,
  "LastName": "Adamo" ,
  "EmployeeID": 2000 ,
  "Designation": "Developer",
  "KnownLanguages": [
    {
      "LanguageName": "Perl",
      "ScoreOutof100": 30
    },
    {
      "LanguageName": "Java",
      "ScoreOutof100": 65
    },
    {
      "LanguageName": "C++",
      "ScoreOutof100": 70
    }
  ]
}
```

Your program should do the following:

- 1- Read JSON Array **1 grade**
- 2- Add new Employee using the above-mentioned structure **2 grades**
- 3- Give the user the ability to search for a specific EmployeeID or Designation and retrieve the search result from the JSON array **2 grades**
- 4- Delete Item from JSON Array **2 grades**

- 5- Update the Employee with ID = 2000 from Developer to Team Leader. **1 grade**
- 6- Retrieve the employees who know the Java language with score higher than 50 and sort the result in ascending order. **2 grades**

Submission rules

- The assignment should be submitted in a **group of 3**.
- The Assignment will be discussed with your TA on **18/12**.
- No late submission will be accepted.
